REPORT OF THE DIRECTOR OF THE REELFOOT LAKE PROJECT

WINFRED L. SMITH
University of Tennessee at Martin

Scenic photography of Reelfoot Lake, Tennessee.

Little progress has been made during the past year on the establishment of a new Reelfoot Lake Biological Station. Preliminary building plans are being drawn and the Champey Pocket area has been chosen as an almost ideal building site. Funding for this project will be difficult to arrange, but the unique nature of the lake demands that all avenues of possible financial support be pursued.

Comments and suggestions from the membership of the Academy are invited.
